

Mark van Gils , VTT Technical Research Centre of Finland Ltd.

Biography

Mark van Gils works as a research professor in AI for wellness and healthcare at VTT Technical Research Centre of Finland. With more than 25 years of experience in health data analysis, van Gils guides researchers in developing machine learning systems that support the diagnosis of complex diseases. During his career, van Gils has worked with renowned university hospitals and health tech companies, and has extensive experience in coordinating international research efforts. Alongside working at VTT he is an adjunct professor at Aalto University and an independent EU research grant evaluation expert. Through his work, van Gils is contributing to a future where the emphasis of healthcare is on disease prevention instead of treatment. Ultimately, he finds sharing the joy of discovery with highly skilled experts to be the best part of it all.
